ABOUT

I am a junior programmer who recently graduated from ESAT (Valencia). During my training, I have gained experience in developing eye-catching rendering techniques and implementing innovative and engaging game mechanics.

I am passionate about game engines and modern rendering techniques. I strive to keep up to date with trends and advances in the industry, and enjoy working on projects that allow me to combine my creativity with my technical skills.

I have worked on a variety of projects both individually and as part of a team, where I have demonstrated my ability to collaborate effectively and bring innovative solutions to technical challenges.

RELEVANT EXPERIENCE

Tiny Terrors: Junior Programmer

SEPTEMBER 2023 - JULY 2024, VALENCIA, ALREADY IN [STEAM](#)

Developing Shelly Manor game with Unreal Engine 5 and C++.

Developed a modular camera system and other gameplay features.

Work focused on artificial intelligence.

EDUCATION

ESAT, HND in Computing, BTEC Level 5

OCTOBER 2021 - JULY 2024, VALENCIA

I studied for three years at ESAT, where I became proficient in C and C++. In addition, I gained knowledge in ARM Assembly, OpenGL and DirectX 11. As well as developing and publishing a game as a final project in Unreal Engine.

SKILLS

C++	C	C#
Unreal	Unity	
DirectX 11 - 12	OpenGL	PS5
HLSL	GLSL	
Git	Perforce	
Render Doc	Nsight	PIX
Visual Studio	CMake	Premake

LANGUAGES

Spanish: Native Proficiency

English: IELTS 6.0 (2024)

Catalan: Native Proficiency

Sheffield Hallam University, Computer Science for Games, BSC HON

SEPTEMBER 2024 - MAY 2025, SHEFFIELD

I studied the final year, where I have been able to learn about game development for PS5 and graphics techniques such as Ray Tracing with DX12.

STUDENT/PERSONAL PROJECTS

Andromeda Engine: *Graphics Engine*

Developed an engine written in C++ with DirectX 11 and OpenGL as render backends. Working with APIs such as PhysX and OpenAL. More info [here](#).

PS5 Render Engine: *Graphics Engine*

Developed an engine written in C++ with DirectX 11 and OpenGL as render backends. Working with APIs such as PhysX and OpenAL. More info [here](#).

DirectX12 Ray Tracing: *Graphics Programming*

Developed a demo of ray tracing written in C++ with DirectX 12. More info [here](#).

Several ASM Demos: *Low Level Programming*

Voxel Ray Tracer terrain and Landscape terrain based on a height map. Programmed in C and ASM with an SDL. More info [here](#).

ADTs: *Low Level Programming*

Developed an API written in C / C++ composed by the following ADT: Memory Node, Vector, List, Double Linked List, Movable Head Vector, Circular Vector, Circular List, Circular Double Linked List, Queue, Stack. API severely influenced by the C++ STL. More info [here](#).

Memory Manager: *Low Level Programming*

Memory management with a custom Memory Manager.

Developed a custom Memory Manager, following the arena allocator pattern which I programmed in C to manage dynamic memory allocation and catch any memory leak. More info [here](#).

Multi Agent System: *IA Demo*

Developed a demo of a multi agent system with different agent roles. Working with Unity and C#. More info [here](#).
